(1) For determining dynamic impedance in voltage mode.

(2) For determining dynamic impedance in current mode.

Series JQE power supplies are systems-type voltage stabilizers with current limiting. They are available in a variety of ratings: 100 watts in a 1/4-rack package, 250-500 watts in a 1/2-rack package, and 1000 watts in a full-rack package.

The tabulation of the effective series resistance and inductance in voltage mode and the effective shunt resistance and shunt capacitance in current mode, is done to allow a calculation of the output impedance versus frequency.

FEATURES

- 10 turn voltage control for exceptional resolution.
- Analog output control by resistance: 1000Ω/Volt; or by a voltage delivering 0-1mA.
- Digital listen only control using SN-series digital interfaces.
- Current limited, front panel control (not programmable) 10%-105% I_O max.
- JQE can control current with an external current-sense resistor.

Model JQE 25-4M Quarter Rack

Model JQE 100-2.5M Half Rack

Model JQE 25-40M Full Rack

JQE are CE marked per the Low Voltage Directive (LVD), EN61010-1.

JQE GENERAL SPECIFICATIONS

SPECIFICATION	RATING/DESCRIPTION	CONDITION	
INPUT			
a-c Voltage	105-125, 210-250V a-c	User selectable	
Current	See model table	Max load, 115V a-c	
Frequency	47-65Hz	Range	
OUTPUT			
d-c Output	Series pass	Transistor	
Type of Stabilizer	Voltage stabilizer	Current limited	
Voltage	0 to 100% of rating	Adjustment range for temp 0-71°C	
Current	0 to 100% of rating		
Error Sense	0.5V per load wire	Static voltage allowance	
Isolation Voltage	500V d-c or peak	Output to ground	
Leakage Current	<5 microamperes	rms at 115V a-c	
Output to Ground	<50 microamperes	p-p at 115V a-c	
Series Connection	500V	Max voltage off ground	
Parallel Connection	Automatic	Use current mode limiting	
	Current sharing	Use master-slave connection	
	Redundancy type	External steering diodes

- (1) External current sensing, using the voltage amplifier. Effects are measured for a 1-Volt current sensing voltage drop.
- (2) Whichever is greater.
- (3) Typical temperature effect coefficients are: 0.005% per °C voltage mode; 0.01% per °C externally sensed current mode.
- (4) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current-mode) through a sensing resistor.
- (5) 20Hz to 10MHz.
- (6) The output effect can be calculated by the relationship:
 $\Delta E_O = \pm E_r(R_f/R_i) \pm \Delta E_{IO}(1+R_f/R_i) \pm I_{IO}(R_f)$ where R_f is the feedback resistor, and R_i is the input resistor from the reference, E_r .

The tabulated offsets, more particularly their change as a function of source, time and temperature, allow a user to calculate performance of the uncommitted amplifier(s) with user specified input and feedback components. The formula for this is given in the static specifications table footnote.

OUTLINE DIMENSIONAL DRAWINGS

Fractional dimensions in light face type are in inches, dimensions in bold face type are in millimeters.

Tolerance: $\pm 1/64"$ (0.4) between mounting holes
 $\pm 1/32"$ (0.8) other dimensions
 Panels: Per Mil. Std. 189

The 1/4 rack and 1/2 rack size JQE power supplies can be rack mounted using RA 24. See page 77.
